

CONFIDENTIAL CASE INTAKE SUMMARY

CLIENT INFORMATION & CASE TYPE

Contact Information

Name: J. Thompson
Phone: (Not Provided)
Email: (Not Provided)

Case Classification

Case Type: Personal Injury
Sub-type: Auto Accident
Date Processed: November 26, 2025
Intake ID: 80264efe

ATTORNEY ACTION NEEDED

Priority: HIGH

- Confirm client's full legal name, contact information, and exact accident date immediately
- Obtain signed medical authorization and request all chiropractic records and billing statements
- Schedule client for comprehensive medical evaluation with MD/orthopedist to document injuries (back, neck, headaches, knee) before treatment gap widens
- Attempt to identify other driver through DMV records using partial description (gray Subaru, older female, I-90 exit 283, early October timeframe) and contact State Farm to open claim
- Obtain client's Geico policy declarations and confirm coverage limits
- Document client's employment records including exact dates missed and wage loss verification from employer
- Attempt to recover photos from broken phone through cloud backup or phone repair/data recovery
- Canvass accident location for surveillance cameras or witnesses given no police report exists

RED FLAGS

- No written admission of fault from the other driver
- Police did not respond to the accident
- Client's uncertainty about insurance details

CASE VIABILITY

Assessment: LOW VIABILITY

Multiple significant red flags compromise viability: (1) No police report and other driver left scene quickly - liability documentation is critical weakness; (2) Verbal fault admission only, no written evidence; (3) Other driver not properly identified - collectability unknown; (4) No MD treatment yet, only chiropractor - medical causation not established; (5) Delayed knee pain raises causation questions; (6) Missing photographic evidence; (7) Vague timeline and details suggest client credibility/organization issues; (8) Treatment gap concerns if accident was 4-6

weeks ago with only 2 chiro visits. Case requires substantial investigative work with uncertain outcome. Liability proof and damages documentation are both problematic. Recommend conditional acceptance only if client can provide better documentation and commit to immediate MD evaluation.

PRELIMINARY VALUE ASSESSMENT

Estimated Range: \$3,000 - \$15,000

Confidence: 35%

Note: This is a preliminary estimate only and not a legal opinion or guarantee.

Basis: Valuation severely limited by incomplete information and weak case foundation. Client reports soft tissue injuries (back tightness, headaches, knee pain) with only chiropractic treatment and 3-5 days lost work. Assuming \$1,500-\$3,000 in chiropractic bills and \$1,000-\$2,000 in lost wages, applying 1.5-3x multiplier yields \$3K-\$15K range. However, confidence is very low due to: no police report, no written admission of fault, no MD treatment establishing medical causation, uncertain other driver identification, missing documentation (photos), vague timeline, and potential treatment gap concerns. New knee pain arising days/weeks later raises causation issues. Without police report and proper documentation, case may be difficult to settle favorably or may not be viable at all.

ACCIDENT SNAPSHOT

Date: early October (approximately one month prior to intake)

Location: Near I-90 exit 283

Client Vehicle: (Not available)

Other Driver: (Not available)

Other Vehicle: Gray Subaru

Police Report: No

Ambulance: No

TREATMENT TIMELINE

October (post-accident): Chiropractor visit - first session

October (post-accident): Chiropractor visit - second session

Recent (day before intake): Onset of knee pain

KEY FACTS

- Accident occurred near I-90 exit 283
- Client was stopped when the accident happened
- Other driver admitted fault verbally
- Client has seen a chiropractor twice
- Client missed work for approximately 3 to 5 days

MISSING INFORMATION

- Exact date of the accident
- Client's full name (confirmation of spelling)
- Medical documentation from a doctor
- Photos of the accident
- Insurance details for the other driver

NARRATIVE SUMMARY

Case Summary

The client, J. Thompson (or possibly Tampson), was involved in an auto accident last month, around early October, near I-90 exit 283. They reported being stopped when they were struck from behind. The other driver, described as an older lady in a gray Subaru, admitted fault verbally but did not provide a written statement.

The client is experiencing several injuries, including back tightness, headaches that come and go, and knee pain that started recently. They have visited a chiropractor twice but have not seen a medical doctor yet. The client missed work for approximately 3 to 5 days due to the accident, and while they have photos of the incident, these are currently on a broken phone.

Insurance details are unclear, with the client mentioning their own Geico insurance and possibly the other driver having State Farm. Notably, the police did not respond to the scene, and both drivers agreed to exchange information, but the other driver left quickly.
